

PEST PROOFING

Checklist

Inspect and seal entry points:

Conduct a thorough inspection of your home's exterior for gaps, cracks, and openings. Seal any potential entry points, including around windows, doors, and utility penetrations

Trim tree branches and shrubs:

Trim back trees and shrubs that may be touching or close to your home. This prevents pests like rodents from using them as a bridge to enter your house.

Secure the trash cans:

Ensure that garbage bins are tightly sealed to discourage pests such as rodents and raccoons from foraging for food near your home.

Clean gutters:

Clear gutters of leaves and debris to prevent standing water, which can attract pests like mosquitoes and termites.

Store firewood away:

If you use firewood, store it at a distance from your home, as it can be a hiding place for pests. Keep it elevated and away from the ground.

Tidy up attic and crawlspace:

Check attics and crawlspaces for signs of pests. Ensure proper insulation and ventilation to discourage pests from nesting.

Check and maintain screens:

Inspect window and door screens for holes or tears. Repair or replace damaged screens to keep out insects like spiders and flies.

Proper food storage:

Store food items in airtight containers to prevent attracting pantry pests like ants, beetles, and rodents.

Regular Vacuuming:

Vacuum frequently, especially in areas where crumbs or food particles may accumulate. This helps eliminate food sources for pests

Schedule Pest Inspection:

Consider scheduling a professional pest inspection before winter sets in. Super Teams Pest Services can identify potential issues and provide preventive treatments.
